Travel and Hospitality App Testing Checklist

In the post-pandemic world, seamless digital connectivity across platforms and devices has become more crucial than ever for delivering safe, contactless, and engaging travel and hospitality experiences. Apps are central to this digital revolution.

To ensure travel and hospitality apps are up-to-date and user-friendly, mobile developers and testers need to perform extensive pre-launch testing, ongoing monitoring, and performance optimization.

Is your app ready for prime time? Find out with our checklist.

1. **Test, monitor, and analyze** apps during QA and in production to ensure flawless digital user experiences
2. Create, execute, and automate tests on a variety of **real devices**
3. Test both **performance and functionality**
4. **Automate testing** with extensive framework and API support, image detection, video-based analysis, and more
5. Test **user authentication** (biometrics, OTP, 2FA)
6. Test **barcode/QR code** input to the app
7. Deliver optimal **localized** experiences for users accessing the app from **anywhere in the world**
8. Ensure seamless **in-app transactions** across **3rd party** payment services
9. Optimize **critical user journeys** by addressing **root causes** of crashes, errors and slowdowns
10. Automate **voice and accessibility** testing with audio match analysis
11. Monitor and optimize **carrier network** and latency effects
12. Ensure **compatibility** across a diversity of carriers, OSes, and devices
